PROJECTS

SHOW ME MY MONEY (Python, Flask, React, Redux, SQLAlchemy, HTML5, CSS3, Heroku)

[live](#) | [github](#)

Full-stack social networking and payment application inspired by Venmo

- Stored user profile pictures in the cloud using AWS S3, reducing server load and allowing users to upload their own images
- Utilized WebSockets to establish a persistent two-way connection between the browser and server so messages between different users can flow in both directions
- Employed Redux state management to simplify React components and directly manage data for form inputs and submissions

YOU MADE THE LIST (Python, Flask, React, Redux, SQLAlchemy, HTML5, CSS3, Heroku)

[live](#) | [github](#)

Full-stack task-management application inspired by Remember the Milk

- Utilized Redux architecture's unidirectional data flow with React for predictable state updates and reliable DOM rendering
- Implemented custom search on tasks using Redux to update state in accordance with the search input
- Adhered to React and ES6 best practices to generate a true single-page reactive web app experience for users exploring various features on their dashboard

CLEVERNOTE (Express, Node.js, React, Redux, HTML5, Sequelize, CSS3, Heroku)

[live](#) | [github](#)

Full-stack note-taking application inspired by Evernote

- Followed best practices for RESTful routing, ensuring a clean transfer of data between the frontend and backend
- Configured the Node.js backend with PostgreSQL, utilizing the Sequelize ORM for validations and database queries
- Created custom modals using React component architecture allowing for efficient development of forms for account log in, notes, notebooks, and tags
